

Basic E-commerce Storefront

This foundational assignment focuses on consuming the Medusa API to build a functional user interface.

1. **Objective:** Create a React-based storefront that displays products from a Medusa backend (which can be a seeded local instance).
2. Key Features to Implement:
 - 2.1. **Product Listing:** Fetch and display a list of products with images, descriptions, and prices.
 - 2.2. **Product Detail Page:** Create a dedicated page for a single product, showing more details.
 - 2.3. **Shopping Cart Management:** Implement a functional shopping cart where users can add/remove items. This involves managing client-side state efficiently
 - 2.4. **Basic Styling:** Ensure a clean and responsive user interface.

* feature 2.3 is a bonus, the intent of the assignment is to get familiar with **medusajs** framework.

Documentation for **medusajs** can be found at <https://docs.medusajs.com>
